In order to use `styledTables` in rmarkdown pdf documents, the resulting object can be printed in the chunk. This will load certain LaTeX packages and render the code from `create_latex_table()` in-place.

```r
library(styledTables)
set.seed(42)

# Create the styled table
st1 <- iris[sample(seq_len(nrow(iris)), 10),] %>%
    styled_table(keep_header = TRUE)

# Apply several styling functions
st1 <- st1 %>%
    set_border_position("all", row_id = 1) %>%
    set_bold(row_id = 1) %>%
    set_fill_color("#00FF00", col_id = 5, condition = X == "setosa")

st1
```
